What Does YOUR IT Operation Look Like?

BEFORE...

If you are like so many growing companies, your IT operations are a lot like this:

- Everything is soooo manual.

- MORE Help Desk requests???

- Can't we monitor anything?

- Why did you call me about THAT?

- Oh, no….

- A virus – because our patching wasn't current???

- This is way too hard.

- How am I supposed to do that on THIS budget?

AFTER!

But once you've implemented LabTech Software, the daily "grind" is a little different:

- Wonder if I can get home early today?

- Not a single "printer" problem all day.

- Hmm, I bet I could automate that too.

- Patching and antivirus at 100%!

- No unauthorized programs running.

- I can make this new budget easily.

- Coffee is good today…

LabTech®

Presented by

Harmony Technologies
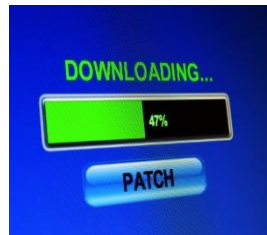

Get Control with LabTech Software

The RIGHT tool for your IT Operations

Continuous monitoring, instant remote access to virtually all of your PCs and servers
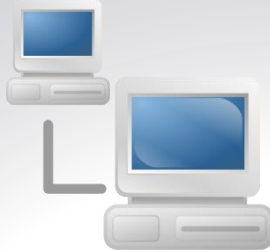

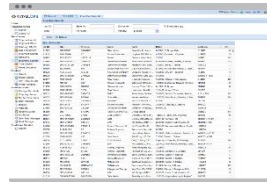

Slam the door on entry points for viruses and hackers

Remediate issues quickly – even **autoremediation** of many common problems
